WOMEN, CHILDREN AND OLDER REFUGEES

THE SEX AND AGE DISTRIBUTION OF REFUGEE POPULATIONS WITH A SPECIAL EMPHASIS ON UNHCR POLICY PRIORITIES

POPULATION DATA UNIT
POPULATION AND GEOGRAPHIC DATA SECTION
UNITED NATIONS HIGH COMMISSIONER FOR REFUGEES

GENEVA, 19 JULY 2001

http://www.unhcr.org

INTRODUCTION

1. This note is based on data collected as part of the 2000 statistical survey on asylum-seekers, refugees and other persons of concern, carried out by the United Nations High Commissioner for Refugees (UNHCR) among its country offices.

2. Persons may be recognized as refugees under the 1951 Convention relating to the Status of Refugees or its 1967 Protocol, the 1969 Organization of African Unity (OAU) Convention Governing the Specific Aspects of Refugee Problems in Africa or in accordance with the UNHCR Statute. This note also covers asylum-seekers and selected groups which are not refugees, but considered of concern to UNHCR, including recently returned refugees and selected groups of internally displaced.

3. While reported by UNHCR country offices, the data are based on various sources, including governments, UNHCR and implementing partners. Registration and data collection practices vary significantly between countries and locations, and the quality of reported information is uneven. In some cases, the data was collected under adverse conditions affecting the accuracy and reliability of the information. For some regions, the number of countries for which demographic information was reported is very limited, affecting the representativeness of the aggregated data. For instance, in Europe, the gender and age composition was available on 155,000 persons of concern to UNHCR, 87% of whom were located in Croatia.

4. It should be stressed that this note analyzes the available data on the demographic composition of persons of concern to UNHCR. As such, it does not necessarily reflect the <u>total</u> population of concern. Table 1 provides an indication of the coverage of the demographic data for each country.

5. In addition to a brief narrative part, this note contains the following tabulations. Table 1 provides an overview of the composition by sex and age for each asylum country as well as by regional aggregates as defined by the United Nations Secretariat. Table 2 provides information by main nationality, whereas Table 3 lists the demographic composition in main refugee locations. In each of the tables, indicators for UNHCR's policy priorities (see below) have been calculated.

POLICY PRIORITY INDICATORS

6. UNHCR collects information on the demographic composition for two main reasons. First, gender and age are among the key factors determining the needs of a population and in planning operational activities. Second and more specifically, a number of UNHCR policy priorities are determined by gender and age, including women, children and elderly refugees[1]. Monitoring

---

[1] *Global Report 2000-Achievements and Impact*, UNHCR, pp. 52-61.

the implementation of these policy priorities requires the collection of appropriate statistics.

7. The special needs of women refugees have long been recognized by UNHCR. As such, the proportion of female refugees is an important indicator for the shape of UNHCR programmes. The proportion of female refugees <u>within</u> each age group has not been calculated, however, for reasons of space. In general, however, the percentage of women is close to that of men in all age groups, except for elderly refugees. Women tend to be overrepresented in the age category of 60 and over, reflecting a longer life expectancy of women compared to men. Consequently, the special needs of elderly women are particularly prominent in countries with ageing refugee populations.

8. Needs of refugee children are multi-faceted, depending in large part on their age. In many refugee operations, children below the age of one (infants) are provided with special care. Children under 5 are the best defined and documented refugee age group. Estimates for the under 5 category are available in most refugee operations as early as the emergency phase. Knowing the number of children under the age of 5 is not only important for assistance purposes, it is also used to estimate the size of the total refugee population. The age group 5 to 17 is a rough indication for children of school age. As such, the size of this population may be used as the denominator to compare school attendance rates across refugee operations. In accordance with the provisions of the 1989 Convention on the Rights of the Child, refugee children are defined as persons below the age of 18 years. This age limit is particularly important from the viewpoint of refugee protection, considering that the rights and needs of minors differ considerably from those of adults.

9. The recent introduction of the age category of 60 and over in UNHCR statistics is not only a reflection of increased global attention to ageing populations, but also of UNHCR activities. Recent operations in regions with ageing populations (former Yugoslavia, Commonwealth of Independent States) have had important implications for UNHCR programmes. Institutionally, UNHCR presented its policy on elderly refugees in 2000[2]. The age limit of 60 applied in UNHCR's global statistics is consistent with the definition of elderly persons by the World Health Organization (WHO).

10. While gender and age are important factors, many other considerations play a role in determining UNHCR operational requirements. For instance, in a number of countries, the national age limit for minors is different from the international standard of 18 years. Similarly, special assistance may be extended to elderly refugees before they have reached the age of 60. Lastly, although the distribution by sex is a core population indicator, monitoring progress in the area of gender equity requires more sophisticated data collection and analysis.

---

[2]   *Older refugees: looking beyond the international year of older persons*, Executive Committee of the High Commissioner's Programme, 7 February 2000 (EC/50/SC/CRP.8).

11. Sometimes, the "proportion of refugee women and children" is used to illustrate UNHCR involvement in policy priorities. While this indicator illustrates women's role in caring for and protecting children in crisis situations, strategies to assist and empower them require a more differentiated approach. This note, therefore, provides detailed indicators by gender and age.

MAIN OBSERVATIONS

12. At the end 2000, the demographic composition of refugees and persons of concern to UNHCR was available for some 6.1 million persons in 115 countries, constituting 41% of the total population of concern in these countries. Compared to 1999, when demographic data was reported on 5.4 millions persons[3], reporting improved by some 13 per cent.

13. Significantly more information is available on the demographic composition of refugees. Thus, 99 asylum countries provided a breakdown of the refugee population by sex and age. For sixty-nine of these countries, the demographic breakdown was available for 90% or more of the refugee population. In 19 countries, the information by gender and age was available for less than 50% of the refugee population. Information on the demographic composition of asylum-seekers or refugees in industrialized countries is very scarce (see also Table 1).

Percentage female refugees in asylum countries (Total = 115)
14. Women of all ages constituted some 51% of the 6.1 million refugees for which information by gender was available. In two-thirds of the countries for which information was available (77 out of 115), the proportion female refugees ranged between 40 and 60% (see box). Regional data confirm that there is relatively little variation between regions in the percentage of female refugees, ranging from 44% in Latin America and the Caribbean to 52% in Asia (see chart). The percentage of female refugees is lower in countries with relatively small populations. In these countries, asylum-seekers and refugees tend to live in urban areas in relatively small households compared to those living in camps.
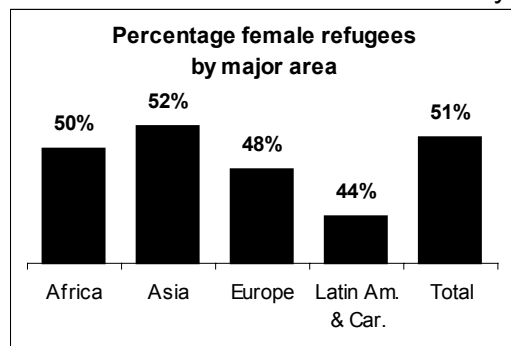

Percentage female refugees by major area

15. The variation in the percentage of children under the age of 5 is much more significant, ranging from 17% in Africa to only 6% in Europe, reflecting global demographic trends (see chart). Countries with the highest proportion

---

[3]   *Refugees and Others of Concern to UNHCR: 1999 Statistical Overview*, UNHCR, July 2000, Chapter III.

of refugee children under the age of 5 are Togo (26%) and Burundi (24%), whereas similarly high rates can also be found in Bangladesh (24%) and East Timor (24%). Large displaced populations with a very small percentage of children are located in Armenia (3%) and Croatia (5%). The proportion of children is generally very low in countries where the number of refugees is small, reflecting the different family composition of urban asylum-seekers and refugees compared to larger displaced populations.

Refugee children below 5

Africa	17%
Asia	12%
Latin Am. & Car.	10%
Europe	6%
16. The population under 18 reflects a similar trend to the population under 5 with Africa hosting the largest proportion of children and adolescents (56%) and Europe the smallest (23%). Even within regions, however, the differences in age composition can be significant. Thus, whereas in Bosnia and Herzegovina and The former Yugoslav Republic of Macedonia children constitute almost half of the refugee population, they represent 21% of the population in Croatia and 17% in the Federal Republic of Yugoslavia. In eight asylum countries, the population under 18 constitutes 60% or more of the total refugee population. Angola hosts the youngest refugee population with 69% of the population below the age of 18.

Refugee children below 18

Africa	56%
Latin Am. & Car.	42%
Asia	39%
Europe	23%
17. As can be expected, the regional proportion of refugees aged 60 and over shows a pattern opposite to that of children. Moreover, regional differences in the proportion of elderly refugees are larger than for any other age group. The high proportion of elderly in Europe (25%) is mostly explained by the ageing population of internally displaced in Croatia (see also Table 2). On average, 2% of the refugees in Africa are aged 60 and over. In some African countries, however, the elderly constitute more than 10% of the refugee population, including in Chad (11%), Libyan Arab Jamahariya (27%), Morocco (13%) and Guinea-Bissau (13%). Because the category 60 years and over was introduced only recently, a number of countries were unable to provide specific information on this age group. If these countries are excluded, the global percentage of elderly refugees amounts to 10% (see Table 1).

Refugees aged 60 and over

Europe	25%
Asia	9%
Latin Am. & Car.	5%
Africa	2%

Table 1. Refugee population by country of asylum, sex and age, end-2000

Including selected groups which are not refugees, but considered of concern to UNHCR. Excluding countries for which no demographic breakdown is available.

[1] Population for which demographic breakdown is available. This does not necessarily equal the total population of concern to UNHCR in each country.

[2] Percentage of the total population of concern to UNHCR for which demographic information is available.

* Category 5 to 17 included in category 18 to 59 year.   ** Category 60 years and over included in category 18 to 59 year. This may also apply to other locations where the population aged 60 and over is 0%.

A dash (-) indicates that the value is zero or not available.   *** Total of countries for which all age categories are available.

Table 2. Refugee population by country of asylum, origin, sex and age, end-2000

Including selected groups which are not refugees, but considered of concern to UNHCR.

Includes nationalities numbering 1,000 or more and only those which were available.

[1] Population for which demographic breakdown is available. This does not necessarily equal the total population of concern to UNHCR.

* Category 5 to 17 included in category 18 to 59 year.   ** Category 60 years and over included in category 18 to 59 year. This may also apply to other nationalities where the population aged 60 and over is 0%.

A dash (-) indicates that the value is zero or not available.

Table 3. Refugee population by country of asylum, location, sex and age, end-2000

Including selected groups which are not refugees, but considered of concern to UNHCR.

Excluding locations for which no information is available and locations hosting less than 10 refugees.

[1] As reported by UNHCR country office.

[2] URB = Urban; CAM = camps/centers; RUR = Rural/dispersed/other.

[3] REF= Refugees; ASY = Asylum-seekers; IDP = Internally displaced; VAR=Various/other

[4] This does not necessarily equal the total population of concern to UNHCR

* Category 5 to 17 included in category 18 to 59 year.

** Category 60 years and over included in category 18 to 59 year. This may also apply to other locations where the population aged 60 and over is 0%.
