CLOSING DATE AND TIME: 28 JUNE 2020 – 23:59 HRS LOCAL TIME

INQUIRIES and RESPONSES

Q1. For item 2.2. Sensor operated, automatic, hygienic toilet seat covers, it is specified that it should be operated by rechargeable battery but additionally it says electrical cabling is also required. But there are two products in the market. One operates by a rechargeable battery (button operated) and the other one is directly using electricity which operates by led sensor. Therefore, could you please indicate exactly which product you require.

A1. Button operated versions are not acceptable. As per the specifications provided, respective item must be sensor operated, automatic, hygienic toilet seat cover. Thus, both products (either operated by rechargeable battery or electrical cabling) are acceptable in case they are sensor operated.
